

# SPRAYER MUD FLAPS AND FENDER LIFT BRACKETS

Protect your sprayer nozzles from the build-up of dirt and mud with the Lankota Mud Flaps. Stainless steel hardware secures the Mud Flap to your existing fender. Heavy-duty rubber can be cut to length for desired ground clearance. Enhance the look of your sprayer by customizing the stainless steel mounts with a name or logo.

Lankota fender lift brackets raise the existing sprayer fender 1.75", allowing for proper clearance when changing to larger tire sizes. Kit includes stainless steel brackets and hardware for all four fenders.

The Lankota Front Fill Kit allows you to fill your John Deere sprayer without the need to fold in the booms, allowing for more spray time with less fill time. Kits are equipped with a pump selector switch along with 3" plumbing, allowing all fill operations to be completed from the front of the sprayer.
