

The Lankota Bale Buggy drops two bales tightly together for quick and easy pickup with a double bale spear or front-end loader. This helps reduce soil compaction and excessive crop damage by allowing you to take less trips through the field when picking up bales.

**BALE BUGGY**

The fully automated Bale Buggy carries one bale while the second bale is being made. The Bale Buggy fits late-model John Deere, Case IH, and New Holland 5 Foot large round balers.

Bale guide bars keep bales uniform while offloading

Net wrap holders for storing extra rolls of net wrap

Reversing valve allows operator to easily remove loose hay if mis-wrapped bale is ejected from baler

10 ply tire mounted on six bolt 15" rim easily carries the biggest bales

Electric-over-hydraulic controls require no operator input

(2) 3,500# Axles

(2) Jack stands for easy hooking/unhooking

Automatic kicker moves bale from baler chamber to Bale Buggy when baler door is fully opened
